How to Install Java Runtime Engine (JRE)

When I try to access FAMIS, Internet Explorer says "This website wants to install the following add-on: 'Java™ SE Runtime Environment 6.0 Update 31' from Sun Microsystems, Inc.' If you trust the website and the add-on and want to install it, click here…" What does this mean?

FAMIS requires that Java be installed and working properly with your web browser. This means that you do not have the correct version of Java installed or setup properly for your browser. Click here for instructions on how to install the JRE.
